

SUE HAS BEEN LIVING with focal segmental glomerulosclerosis, a rare kidney disease, since 1992. Last year her kidneys started to fail. Doctors say the best treatment is for her to receive a living donor for a kidney transplant. Since no one in our family is eligible to donate, we are using social media and spreading the word in hopes that someone will see our story and register as Sue's donor. ❤️

HOW YOU CAN HELP

There are 3 ways you can help us today!

REGISTER AS A DONOR
